1. The first part of the exam is a multiple choice question. The question is about the structure of the cell membrane. The correct answer is that the cell membrane is a phospholipid bilayer. The phospholipids have hydrophilic heads and hydrophobic tails. The heads are on the outside and the tails are on the inside. This structure allows the membrane to be flexible and to act as a barrier between the inside and outside of the cell.

2. The second part of the exam is a short answer question. The question is about the function of the cell membrane. The correct answer is that the cell membrane controls the entry and exit of substances into and out of the cell. It also provides structural support and protection for the cell.

IMMEDIATELY AFTER THE EXAM, WRITE DOWN EVERYTHING YOU CAN REMEMBER ABOUT IT:

3. The third part of the exam is a long answer question. The question is about the structure and function of the cell membrane. The correct answer is that the cell membrane is a phospholipid bilayer. The phospholipids have hydrophilic heads and hydrophobic tails. The heads are on the outside and the tails are on the inside. This structure allows the membrane to be flexible and to act as a barrier between the inside and outside of the cell. The membrane also contains proteins that control the entry and exit of substances into and out of the cell.
